

High-Speed $\pm 100V$ 2.5A Two-or-Three-Level Ultrasound Pulsers

Features

- High-Density Integration AC-coupled Pulser
- 0V to $\pm 100V$ Output Voltage
- $\pm 2.5A$ Source and Sink Minimum Pulse Current
- Up to 35 MHz Operating Frequency
- 2 ns Matched Delay Times
- 2.5V, 3.3V or 5V CMOS Logic Interface
- Built-in Two-terminal Low-noise Interface for HV7361
- Low Power Consumption and No Floating Power Supply Rails or Decoupling Capacitors

Applications

- Medical Ultrasound Imaging
- Piezoelectric Transducer Drivers
- Ultrasound Industrial NDT
- Pulse Waveform Generator

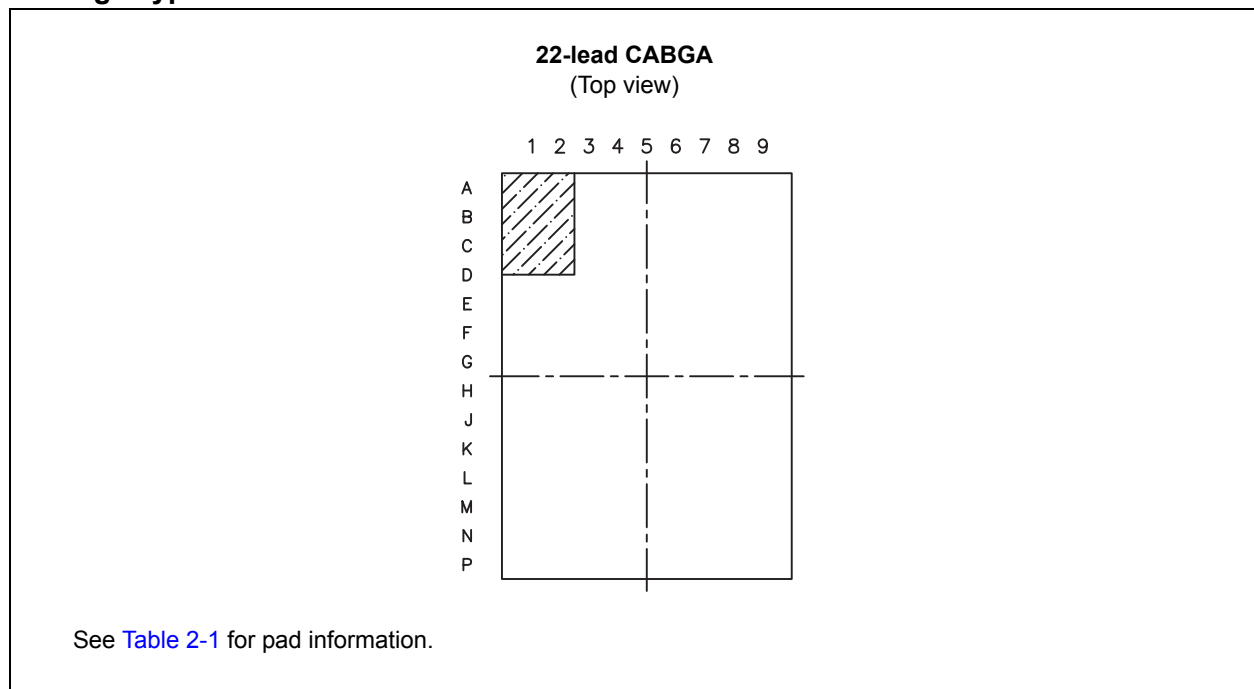

General Description

The HV7360/HV7361 are high-voltage and high-speed pulse generators with built-in, fast return-to-zero damping Field-Effect Transistors (FETs). An added feature to HV7361 is an integrated two-terminal low-noise T/R switch. These integrated circuits are designed not only for portable medical ultrasound image devices but also for NDT and test equipment applications.

Both the HV7360/HV7361 are composed of controller logic interface circuits, level translators and AC-coupled Metal Oxide Semiconductor Field-Effect Transistor (MOSFET) gate drivers. They also have high-voltage and high-current P-channel and N-channel MOSFETs as output stages.

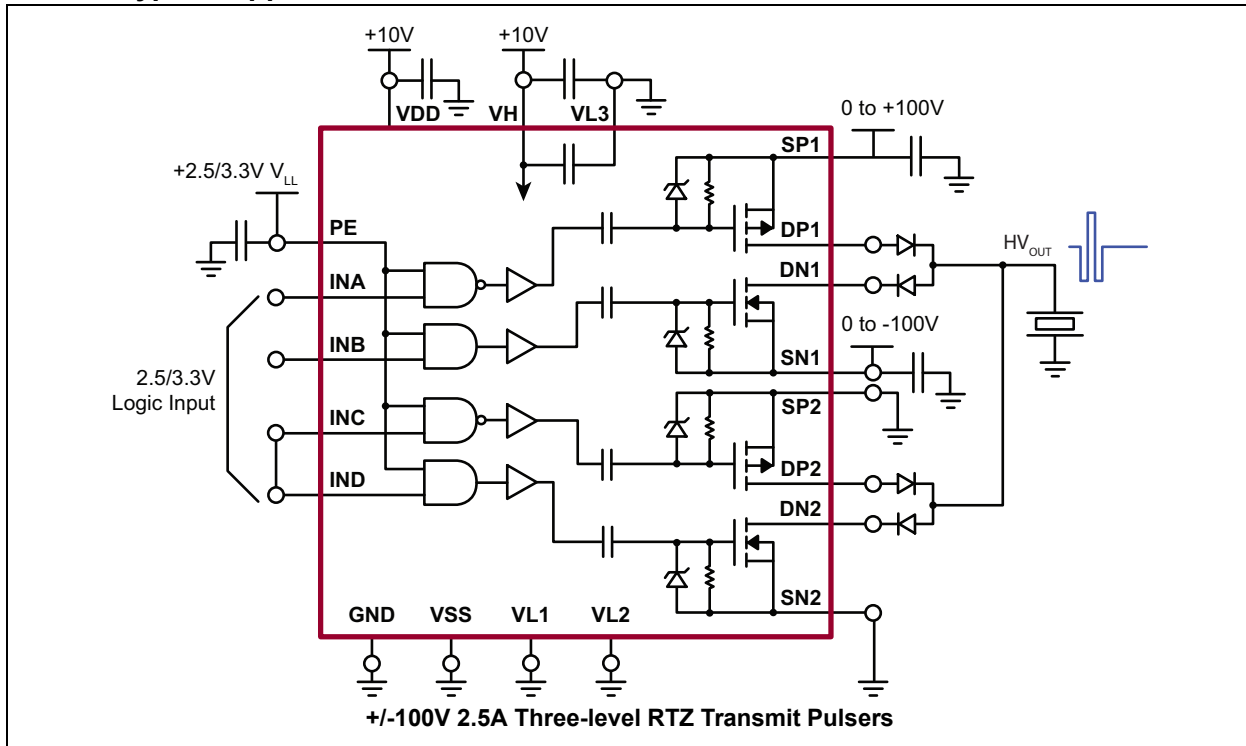

The peak output currents of each channel are guaranteed to be over $\pm 2.5A$ with up to $\pm 100V$ of pulse swing. The AC coupling topology for the gate drivers not only saves two floating voltage supplies but also makes the PCB layout easier.

Absolute Maximum Ratings †

Chip Power Supply Voltage, $V_{DD}-V_{SS}$	-0.5 to +12.5V
Output High Supply Voltage, V_H	$V_L-0.5$ to $V_{DD}+0.5V$
Output Low Supply Voltage, V_L	$V_{SS}-0.5V$ to $V_H+0.5V$
Low-side Supply Voltage, V_{SS}	-6V to +0.5V
Differential High Voltage, $V_{SP1}-V_{SN1}$, $V_{SP2}-V_{SN2}$	+220V
Positive High Voltage, $V_{SP1,2}$	-0.5V to +110V
Negative High Voltage, $V_{SN1,2}$	+0.5V to -110V
All Logic Input Voltages	$V_{SS}-0.5V$ to GND +5.5V
Rx to XDCR Differential Drop	±140V
Coupling Capacitor Breakdown Voltage	±110V
Maximum Junction Temperature, T_J	125°C
Operating Ambient Temperature, T_A	-40°C to +85°C

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

NOTES:

APPENDIX A: REVISION HISTORY

Revision C (June 2017)

The following is the list of modifications:

- Updated the operating ambient temperature in Absolute Maximum Ratings † and in the Temperature Specifications table
- Made minor text changes throughout the document

Revision B (April 2017)

- Removed the INC to IND connection line and changed the typical high voltage supply from +200V to +100V in [Figure 3-4](#)
- Removed “HVCMOS[®] Technology for High Performance” from the Features Section
- Made minor text changes throughout the document

Revision A (June 2016)

- Converted Supertex Doc# DSFP-HV7360 and Supertex Doc# DSFP-HV7361 to Microchip DS20005570C
- Merged HV7360 and HV7361 into one document
- Replaced the 22-lead LFGA “LA” package with 22-lead CABGA “GA” package
- Made minor text changes throughout the document

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
