

SST12CP11 is a high-power and high-gain power amplifier (PA) based on the highly-reliable InGaP/GaAs HBT technology. This PA can be easily configured for high-power applications with good power-added efficiency while operating over the 2.4-2.5 GHz frequency band. It can also be configured to operate at 1.8 GHz for Pico Cell applications. SST12CP11 typically provides 33 dB gain and has excellent linearity, typically ~3% EVM at 25 dBm output power at 54 Mbps 802.11g operation while meeting 802.11g spectrum mask at 28.5 dBm. The power amplifier IC includes an output power detector that has a wide dynamic range and is VSWR-insensitive. SST12CP11 features easy board-level usage along with high-speed power-up/-down control and is offered in 16-contact VQFN package.

Features

- **High Gain:**
 - Typically 33 dB gain across 2.4–2.5 GHz over temperature -40°C to +85°C
- **High linear output power:**
 - >30 dBm P1dB
 - Please refer to “Absolute Maximum Stress Ratings” on page 5
 - Meets 802.11g OFDM spectrum mask requirement up to 28.5 dBm
 - EVM~3% up to 25 dBm for 54 Mbps 802.11g signal
 - 2.5% EVM up to 23.5 dBm, 802.11n, HT40
 - 1.75% EVM up to 21.5 dBm, 802.11ac MCS8
 - Meets 802.11b ACPR requirement up to 28.5 dBm
- **High-speed power-up/down**
 - Turn on/off time (10%-90%) <100 ns
- **10:1 VSWR survivability (unconditionally stable up to 28.5 dBm)**
- **On-chip power detection**
 - 20 dB dynamic range
 - VSWR- and temperature-insensitive
- **Simple input/output matching**
- **Packages available**
 - 16-contact VQFN (3mm x 3mm)
- **All non-Pb (lead-free) devices are RoHS compliant**

Applications

- **WLAN (IEEE 802.11b/g/n)**
- **AP router**
- **WiMax (IEEE 802.16e)**
- **Home RF**
- **Cordless phones**
- **2.4 GHz ISM wireless equipment**
- **1.8 GHz Pico Cell**

Product Description

SST12CP11 is a high-power and high-gain power amplifier (PA) based on the highly-reliable InGaP/GaAs HBT technology.

This PA can be easily configured for high-power applications with high power-added efficiency while operating over the 2.4-2.5 GHz frequency band. It typically provides 33 dB gain with 15% power-added efficiency @ $P_{OUT} = 25$ dBm for 802.11g.

SST12CP11 has excellent linearity, typically 3% added EVM at 25 dBm output power with 54 Mbps 802.11g operation while meeting 802.11g spectrum mask at 28.5 dBm. SST12CP11 also has a single-ended power detector which lowers the users' cost for power control.

The power amplifier IC also features easy board-level usage along with high-speed power-up/-down control.

SST12CP11 is offered in 16-contact VQFN package. See Figure 2 for pin assignments and Table 1 for pin descriptions.

Functional Blocks

Pin Assignments

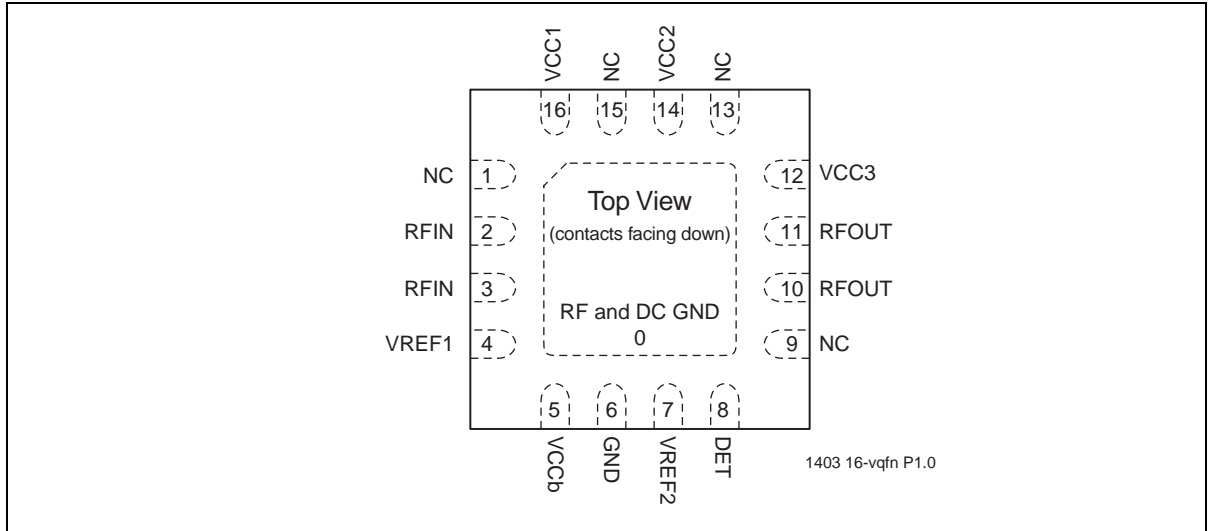

Figure 2: Pin Assignments for 16-contact VQFN

Pin Descriptions

Table 1: Pin Description

Symbol	Pin No.	Pin Name	Type ¹	Function
GND	0	Ground		The center pad should be connected to RF ground with several low inductance, low resistance vias.
NC	1	No Connection		Unconnected pins.
RFIN	2		I	RF input, DC decoupled
RFIN	3		I	RF input, DC decoupled
VREF1	4	Power Supply	PWR	1 st stage, idle-current control
VCCb	5	Power Supply	PWR	Supply voltage for bias circuit
GND	6	Ground		
VREF2	7	Power supply	PWR	2 nd and 3 rd stage, idle-current control
Det	8		O	On-chip power detector
NC	9	No Connection		Unconnected pins.
RFOUT	10		O	RF output
RFOUT	11		O	RF output
VCC3	12	Power Supply	PWR	Power supply, 3 rd stage
NC	13	No Connection		Unconnected pins.
VCC2	14	Power Supply	PWR	Power supply, 2 nd stage
NC	15	No Connection		Unconnected pins.
VCC1	16	Power Supply	PWR	Power supply, 1 st stage

Electrical Specifications

The AC and DC specifications for the power amplifier interface signals. Refer to Table 3 for the DC voltage and current specifications. Refer to Figures 3 through 21 for the RF performance.

Absolute Maximum Stress Ratings (Applied conditions greater than those listed under “Absolute Maximum Stress Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these conditions or conditions greater than those defined in the operational sections of this data sheet is not implied. Exposure to absolute maximum stress rating conditions may affect device reliability.)

Input power to pins 2 and 3 (P_{IN})	-3 dBm
Supply Voltage at pins 5, 12, 14, 16 (V_{CC})	+5.5V
Reference voltage to pins 4 (V_{REF1}) and pin 7 (V_{REF2})	+3.1V
DC supply current (I_{CC})	650 mA
Operating Temperature (T_A)	-40°C to +85°C
Storage Temperature (T_{STG})	-40°C to +120°C
Maximum Junction Temperature (T_J)	+150°C
Surface Mount Solder Reflow Temperature	260°C for 10 seconds

Table 2: Operating Range

Range	Ambient Temp	V_{CC}
Industrial	-40°C to +85°C	5.0V
